The problem is investigated.

The temporary solutions are:

- 1) remove files that cause problems from cache
- 2) add caching exceptions to the configuration file /var/cache/nginx/cs/.cs/cs.conf

Example:

```
exe_trailing:  
is_enabled: yes  
online:  
  collector: "default"  
  loading:  
    algorithm: "general"  
    required_weight: 7  
  urls:  
    matching:  
      - sources:  
        - '\.exe$'  
    loadable_rejecting:  
      - "pokerstars.com" # ban all urls which contains pokerstars.com
```

3) restart ccu

```
ccu stop --conf /var/cache/nginx/cs/.cs/cs.conf
```

```
ps -ef|grep ccu  
Check that all processes were terminated
```

```
ccu online --conf /var/cache/nginx/cs/.cs/cs.conf --daemon
```
