## Содержание

The problem is investigated.

The temporary solutions are:

- 1) remove files that cause problems from cache
- 2) add caching exceptions to the configuration file /var/cache/nginx/cs/.cs/cs.conf

```
Example:
    exe_trailing:
    is_enabled: yes
    online:
    collector: "default"
    loading:
    algorithm: "general"
    required_weight: 7
    urls:
    matching:
    - sources:
    - '\.exe$'
    loadable_rejecting:
    - "pokerstars.com" # ban all urls which contains pokerstars.com
```

## 3) restart ccu

```
ccu stop --conf /var/cache/nginx/cs/.cs/cs.conf
```

```
ps -ef|grep ccu
Check that all processes were terminated
```

```
ccu online --conf /var/cache/nginx/cs/.cs/cs.conf --daemon
```
