PPPoE Radius Access-Request 3

PPPoE Radius Access-Request

PPPoE sessions authorization is performed by the Radius server through the fastPCRF server, see the [fastPCRF settings](#). FastPCRF is the part of the Stingray SG and is essentially a proxy between the fastDPI and a third-party Radius server.

Access-Request requests and Access-Accept along with Access-Reject responses differ from those used in [L3-authorization](#).

- [Access-Request format for the PPPoE networks](#)
- [Access-Accept format for the PPPoE networks](#)
- [Access-Reject format for PPPoE networks](#)
