# Filtering rules management interface

# **Universal Locking Rules UI**

# Introduction

Universal locking rules (ULR) UI is designed to manage filtering rules on multiple DPIs simultaneously using a graphical interface.

# Installation

Equipment or virtual machines with the following characteristics are suitable for the subsystem:

- 1. CPU 2.5 GHz, 2-4 cores
- 2. RAM from 8 GB (mainly for sphinx)
- 3. Hard drive (HDD) 50 GB 250 GB
- 4. Cent OS 7+ operating system (we do not recommend to not install minimal, because most of the dependencies will have to be installed manually)
- 5. Network Card (NIC) from 10 Mbps

We recommend Cent OS 7+ operating system. **Do not not install minimal, because most of the dependencies will have to be installed manually.** If you need to install software on Cent OS 6, make sure that supervisor 3+ is installed. If you do not have the package, please contact technical support.

 $\bigcirc$ 

The locking rules management interface is a special section of The VAS Experts DPI Graphical User Management Interface ver.2. The installation is similar to the script of The VAS Experts DPI Graphical User Management Interface ver.2.

# Configuration

# .env Configuration

The subnet configuration is handled with .env file.

```
/var/www/html/dpiui2/backend/.env
```

The file contents:

#Redirect URL for "White list" service ULR WHITE LIST REDIRECT URL=https://google.com #The period after Ulr tasks data is deleted (days) ULR\_QUEUE\_DELETE\_TASKS\_DAYS\_INTERVAL=1 #ASN for IP-exception rules ULR IP EXCLUDE ASN=64401 #The host for blocked resources list deployment. To connect the blocked resources server. ULR BLACK LIST DEPLOY HOST=<IP address or host of global locks web-server> #The port for blocked resources list deployment. To connect the blocked resources server. ULR BLACK LIST DEPLOY PORT=22 #Username for blocked resources list deployment. To connect the blocked resources server. ULR\_BLACK\_LIST\_DEPLOY\_USER=default #Password for blocked resources list deployment. To connect the blocked resources server. ULR BLACK LIST DEPLOY PASS= #To use sudo for blocked resources list deployment. (0 - do not use, 1 use) ULR\_BLACK\_LIST\_DEPLOY\_SUD0=1 #Black lists saving path. ULR\_BLACK\_LIST\_DEPLOY\_PATH=/var/www/html/blacklists/ #Log Detail Level (0 - info, 1 - debug, 2 - tracing). ULR LOAD LOG LEVEL=0

After changing the .env file, you need to run the command

php /var/www/html/dpiui2/backend/artisan queue:restart

These settings can be added to the configuration in the Administrator  $\rightarrow$  DPIUI2 Server Configuration section in the The VAS Experts DPI Graphical User Interface ver.2.

# **Key Installation**

To use the Universal Locking Rules UI, you need to activate the ULR-license in DPIUI2 with a command:

```
dpiui2 ulr_lic --make=1
```

Next:

- 1. Enter license level: standard
- 2. Enter the license completion date in the Y-m-d format (e.g. 2099-12-31)
- 3. Enter the license password.

If the data is correct, a success message will be displayed:

```
dpiui2 ulr_lic --make=1
Enter level:
> standard
Enter expire date in Y-m-d format:
> 2099-12-31
Enter password:
>
stdClass Object
(
   [success] => 1
)
```

## **Roles Management**

In the DPIUI2 interface visit the Administrator  $\rightarrow$  Roles section. Create a new role and set read and write permissions in the ulr\_admin section:

EXPORT				GAN	CEL DELETE

**Attention**: Before deleting a profile, make sure there are no ISP profiles referring to this category!

# Web Server for Global Lists Configuration

# Web-server

1. Prepare a machine with CentOS7+ installed

2. Create a sudo user without password as described in Dpiui2: DPI connection details section

3. Run the script:

```
rpm --import http://vasexperts.ru/centos/RPM-GPG-KEY-vasexperts.ru
rpm -Uvh http://vasexperts.ru/centos/6/x86_64/vasexperts-repo-1-0.noarch.rpm
yum install dpiutils -y
yum install httpd -y
yum install unzip -y
mkdir /var/www/html/blacklists
chmod -R 777 /var/www/html/blacklists
echo "
<VirtualHost *:80>
    DocumentRoot \"/var/www/html/blacklists\"
    <proxy *>
    Order deny,allow
    Allow from all
    </proxy>
</VirtualHost>
" > /etc/httpd/conf.d/bl_lists.conf
firewall-cmd --permanent --add-port=80/tcp
firewall-cmd --reload
```

```
systemctl enable httpd.service
systemctl restart httpd.service
```

4. In dpiui2 configuration specify the web-server access parameters in ULR settings section

5. Specify the path to Custom lock list in the settings of all connected FastDPI servers:

```
# URL dictionary for blocking by HTTP (custom_url_black_list)
custom_url_black_list=http://<IP address of Web-server>/blacklist.dict
# Names dictionary for blocking HTTPS protocol by certificate
(custom_cname_black_list)
custom_cname_black_list=http://<IP address of Web-server>/blacklistcn.dict
# IP addresses dictionary for blocking HTTPS by IP (custom_ip_black_list)
custom_ip_black_list=http://<IP address of Web-server>/blacklistip.dict
# Host names dictionary for blocking HTTPS by SNI (custom_sni_black_list)
custom sni black_list=http://<IP address of Web-server>/blacklistip.dict
```

# **DSCP** Rules

Change to "Applications and policings" section  $\rightarrow$  "DSCP Rules".

# **VIP Subscriber Management**

#### VIP Subscribers and their privileges

**VIP Subscriber** is a special subscriber whose traffic is passed with a dedicated priority (default is cs0) regardless of the priority settings for application protocols. The allocated priority is set by the special\_dscp configuration parameter. See section Configuration. The subscriber is connected through the installation of service 15 on DPI.

Privilege:

• Unlimited access to applications and resources that are subject to restrictions on use.

#### **Purpose of section**

This section is purpose to manage VIP Subscribers.

#### Getting started with section

Open section "IP & AC Exclusion"→"VIP Subscribers".

┥ Will Experts	IP & ADD EXCLUDES (VP DURICIDARIUS LIST				m- (	D O

- 553 RATE	Unit Bps ~	- 683 GBL	Mips - Static	Applications CS3 list
- 554 RATE	Unit Bps ~	- 664 GBL	Mapa · Startic	Applications CS4 list
6 CSS RATE	Bps ~	- 685 GBL 110	Unit Static	Applications CS5 list

In the popup editing form:

note

- Enter policing description;
- Choose policing type TBF/HTB (form with class values will look different depending on the type selected)

You can use configuration autocomplete:

- For HTB type: rate=8Bps, ceil=value that was specified in autocomplete form;
- For TBF type: rate=value that was specified in autocomplete form.

Th save the changes click on the button "Save profile" or "Save and disable/eneble".

Thy policing profile is disabled by default.

#### **Deletenig Policing Profile**

There are two ways to delete the profile: by clicking "Delete profile" button in the list of policing profiles or the same button on Editing Profile page.

# **WEB and IP Filter**

## **Locking Rules List**

Change to the "WEB and IP Filter" section.

SYSTEM GLOBAL STATE     DICTIONARIES	

- With the global whitelist mode enabled, the whitelist service is applied to all ISP profiles and resource lists are formed only from global whitelist rules;
- When the whitelist mode is enabled for a separate ISP profile, the service is applied only to ISP which has it enabled. The lists are formed only from white list rules which refer to this ISP profile;
- If both mode are enabled, global and separate ISP rules lists are concatenated. For other ISPs, the whitelist service is used with only the global whitelist rules.

# Database search (global)

Change to the "Database search" section.

In the "IP, CIDR, Domain, Comment" field enter the value in accordance with the prompts at the top of the page, choose search type: Full Text, By Resources or By Description. Click on "Search" button.

As a result, all blocking rules (with type specified) that match the selected search parameters will be displayed.
