Server Configuration 3

Server Configuration

This section contains a list of settings and their parameters.

The CAPTCHA client configuration is performed through the form and editor or directly via the .env configuration file.

Below is the diagram of the configuration graphical interface.

For each parameter, you can view a description by clicking the "Question" button to the right of the corresponding parameter.

To save the edited parameters, click the "Save" button.

To refresh the form, click the "Refresh" button.

For direct editing of parameters in the config file, open the Editor.

For a complete list of parameters, please refer to the content of the page below.
