QoE Stor server connection 3

QoE Stor server connection

You can connect one or more QoE Stor servers for SSH management. You may need to connect multiple QoE Stor servers if you are setting up a cluster of QoE Stor servers.

To set up a connection, follow these steps:

1. Connect to the server (where QoE Stor is installed) via SSH. Add a sudo user on this hardware. See [sudo user](#).
2. In the GUI, open the [Administrator / Equipment](#) section, add new equipment. Select Hardware Type - QoE Stor. See [Add \(connect\) new server](#).

Don't forget to add an HTTP connection to QoE Stor. See section GUI Configuration. If you have a cluster of QoE Stor servers, an HTTP connection must be configured to the Master server of the cluster.
