# GUI logs

To go to the section, click the ADMINISTRATOR menu item, then click the GUI LOGS menu item.

The screenshot shows the VAS Experts application interface. On the left, there is a sidebar with various sections like 'SSG control', 'PCRF control', 'QoE analytics', 'VAS cloud services', 'Lawful interception', 'Administrator', 'Equipment', 'Users', 'Roles', 'GUI configuration', 'GUI logs' (which is highlighted), and 'GUI update'. The version 'Version 2.24.2' is at the bottom. In the center, under 'Administrator > GUI logs', there is a 'Files' section with a tree view. Under 'Dpiul2', several log files are listed: 'interface.01.07.2022.01.13.44.log', 'interface.01.07.2022.02.43.13.log', 'interface.01.07.2022.04.13.15.log', 'interface.01.07.2022.06.42.13.log', 'interface.01.07.2022.07.10.49.log', 'interface.01.07.2022.08.41.24.log', 'interface.01.07.2022.10.07.02.log', 'interface.01.07.2022.11.36.44.log', 'interface.01.07.2022.13.03.20.log', 'interface.01.07.2022.13.53.22.log', and 'interface.01.07.2022.14.39.14.log'. To the right of the file list, there is a 'Log file content' panel showing the first few lines of the selected file ('interface.01.07.2022.01.13.44.log'). The content includes log entries from July 1, 2022, such as INFO and ERROR messages related to session management and hardware lists.

## View Server files

To create or view a custom server that provides access to work in the section, go to [«Equipment»](#)

To update the list of files, click on the "**Update**" button located in the toolbar.

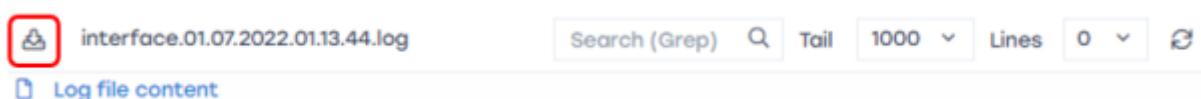

To view the contents of the file, double-click on the selected file. A form with information will open on the right.

## View the contents of log files

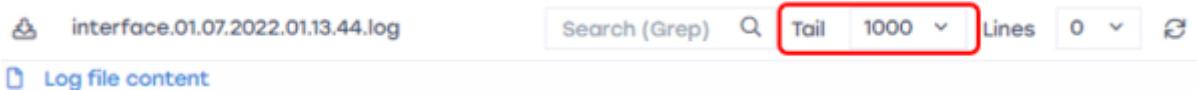

### Download file

To download the file completely to your device, click on the "**Download the file completely**" button.

## Get information on the last lines

To get information on the last n-lines of the log file, select the appropriate value from the drop-down list.

## Update the log file

To update the file, click on the "**Update**" button.
