Authorization and first launch 3

Authorization and first launch

Since a self-signed ssl certificate is installed, the window that follows will appear in the browser (in different browsers it appears in different ways, in the screenshot below Google Chrome is shown):

Click on "ADVANCED" to open. The window will appear:

Press "Proceed to ..." to the site.

At the first start the login window opens. You need to supply a username and a password.

The screenshot shows a web interface for the VAS Experts DPI control panel. At the top left is a blue logo of a stylized bird or wing. At the top right, there is a language selector showing a UK flag, the text 'Eng.', and a dropdown arrow. The main heading is 'Sign in to control panel VAS Experts DPI'. Below this is a 'Login' label. There are two input fields: the first is labeled 'Login' and the second is labeled 'Password'. Below the password field is a checkbox labeled 'Remember me' which is checked. To the right of the checkbox is a 'Sign in' button. At the bottom right corner, the version number 'v2.0.6' is displayed.

If the "Remember me" check box is selected the session is remembered and the authorization is no longer required.

During the installation the following user is created by default:

1. Login - admin
2. Password - vasexperts

If you are logged in for the first time, you need to configure the hardware. See the section [Managing the list of devices](#)
