Raw Fullflow compression

Configuration settings

Перейти: Administrator → GUI Configuration → QoE Stor: Raw log aggregation settings

There you will find 3 settings:

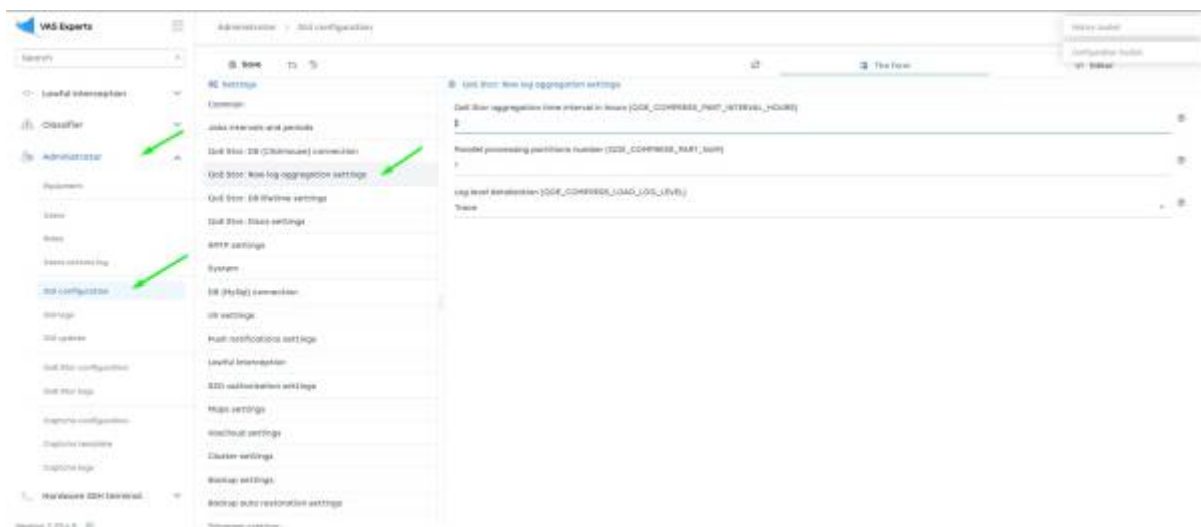

1. QoE Stor aggregation time interval in hours

Set the raw log aggregation time interval to at least 2 hours

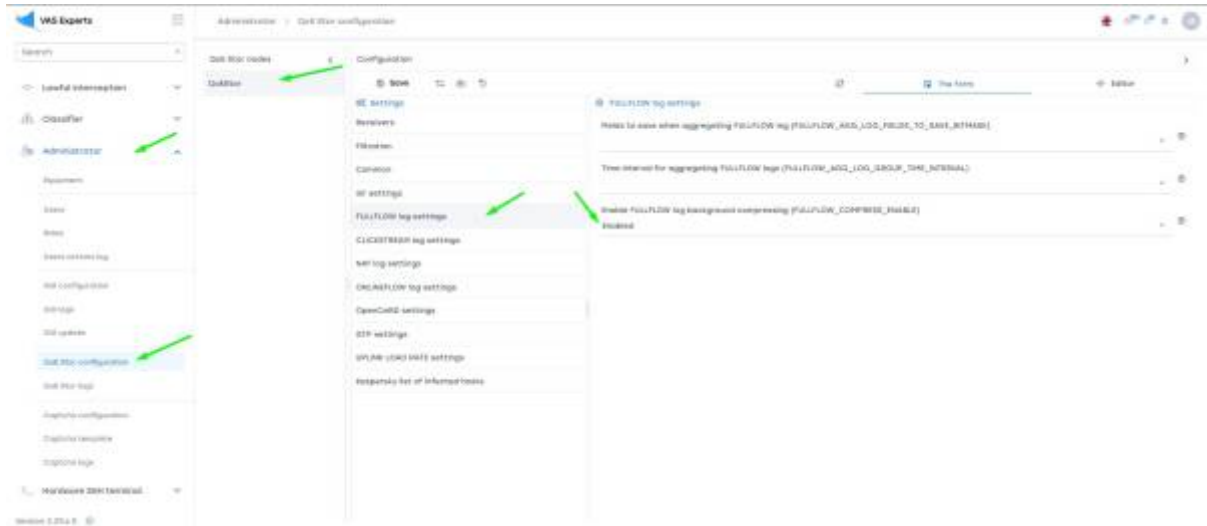

2. Parallel processing partitions number

3. Log level detalization

You also need to move: Administrator → Configuration QoE Stor → Fullflow log settings

There you can find: "Enable FULLFLOW log background compressing"

View aggregated raw logs Fullflow

Move: QoE analytics → Administrator → Tablesapce info → Aggregation raw logs fullflow info

Add image(agggregation_row_logs_fullflow_info.jpg)

In the open window you can select the period

Add image(select_period_in_aggregation_raw_logs_fullflow_info.jpg)

Also you can delete all or selected logs

Add image(fullflow_compress:clear_logs.jpg)
