Raw Fullflow compression

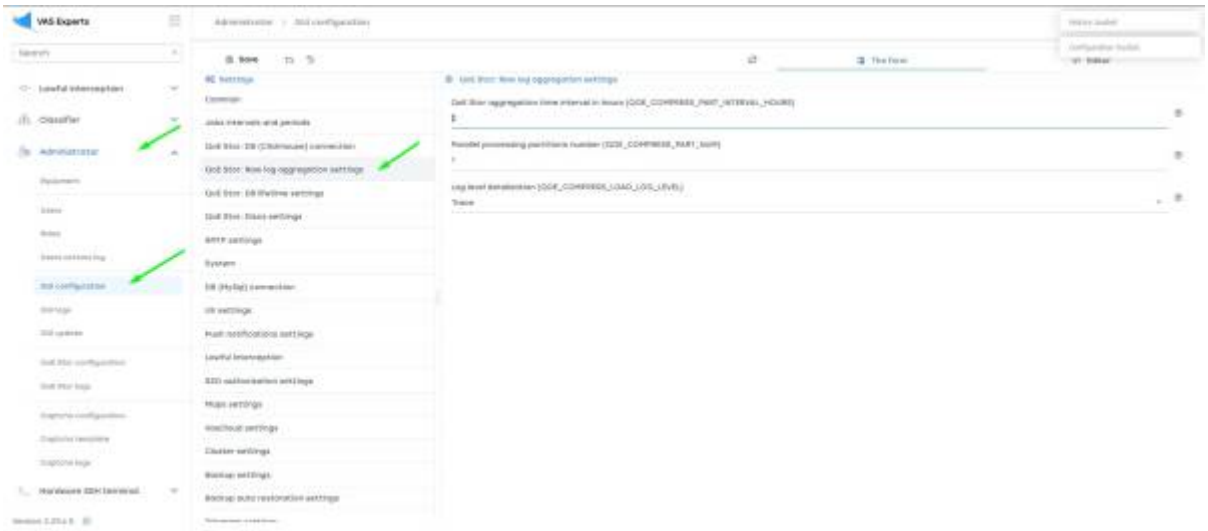
Configuration settings

Move: Administrator → GUI Configuration → QoE Stor: Raw log aggregation settings

There are 3 settings:
1. QoE Stor aggregation time interval in hours

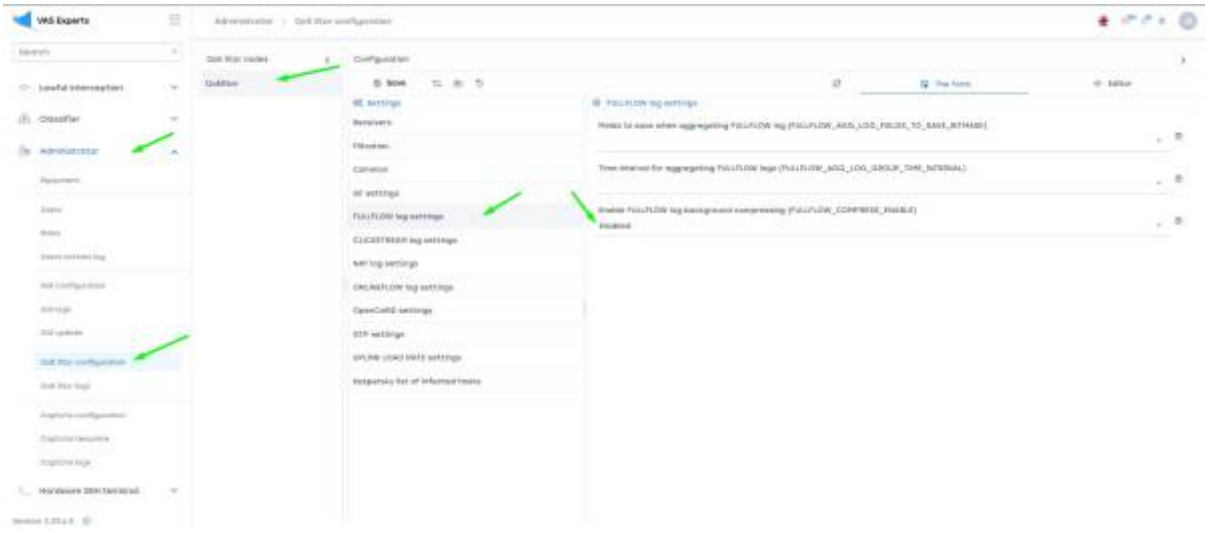
Set the raw log aggregation time interval is recommended to be at least 2 hours

2. Parallel processing partitions number
3. Log level detalization



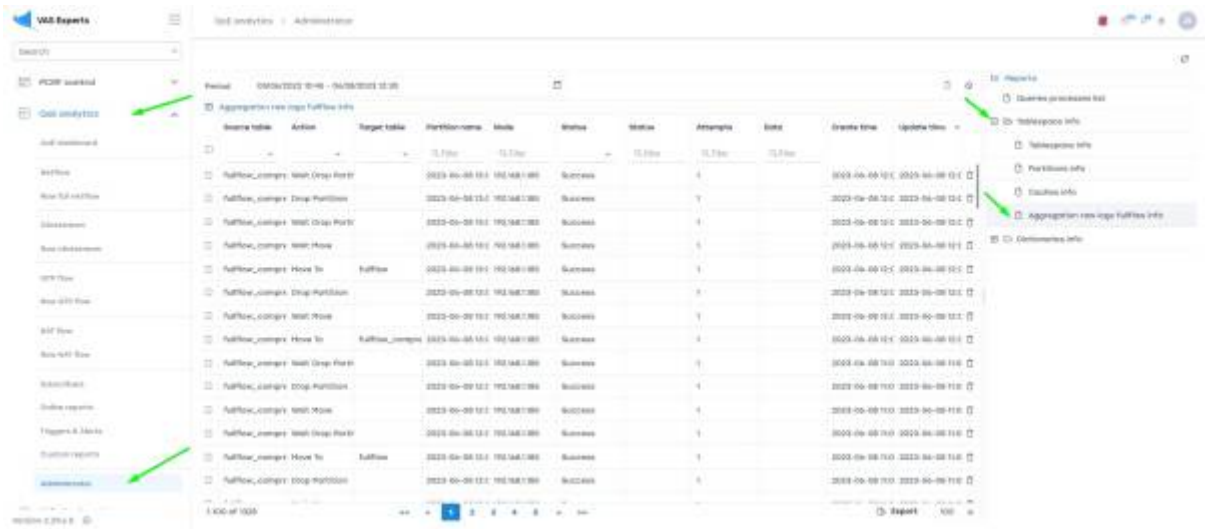
Also necessary move: Administrator → Configuration QoE Stor → Fullflow log settings

There you can find: "Enable FULLFLOW log background compressing"

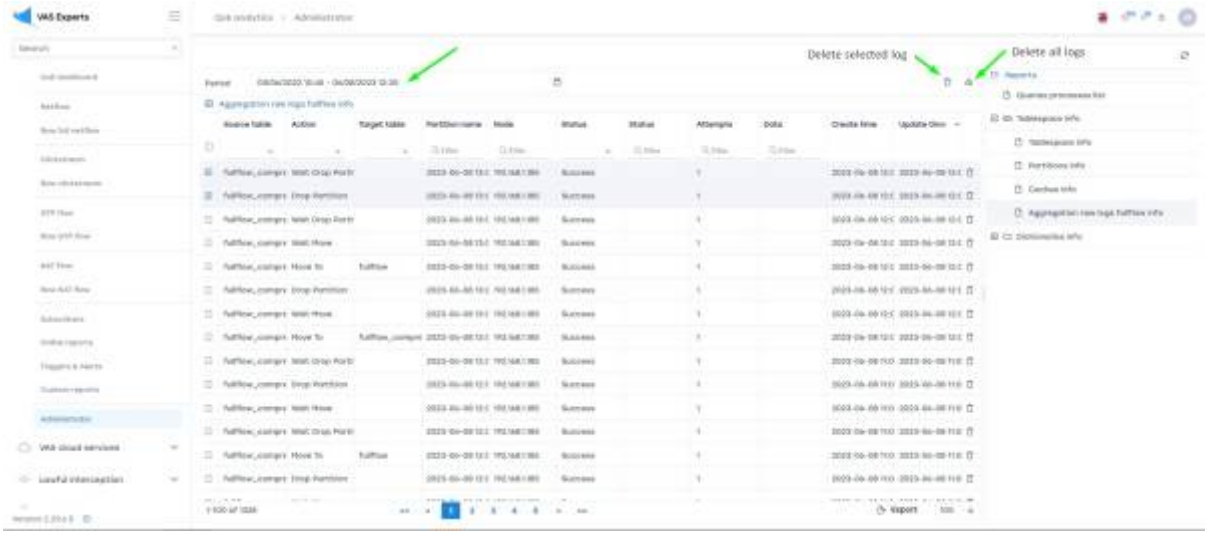


View aggregated raw logs Fullflow

Move: QoE analytics → Administrator → Tablesapce info → Aggregation raw logs fullflow info



The section that opens displays information about completed tasks for compressing the raw fullflow log with the ability to set a filter by time, as well as delete tasks.



Delete selected log
Delete all logs
