Raw Fullflow compression

Configuration settings

Step 1. Go to Administrator → GUI Configuration → QoE Stor: Raw Log aggregation settings.

Set the values for all three parameters.

The screenshot shows the VAS Experts GUI Configuration interface. On the left, there is a sidebar with various configuration sections like SSG control, PCRF control, QoE analytics, VAS cloud services, Lawful interception, and Administrator. Under the Administrator section, the 'GUI configuration' tab is selected. In the main content area, the 'QoE Stor: Raw log aggregation settings' page is displayed. It contains three configuration fields:

- QoE Stor aggregation time interval in hours (QOE_COMPRESS_PART_INTERVAL_HOURS): Value 2
- Parallel processing partitions number (QOE_COMPRESS_PART_NUM): Value 1
- Log level detailization (QOE_COMPRESS_LOAD_LOG_LEVEL): Value Trace

Step 2. Go to Administrator → Configuration QoE Stor → Fullflow log settings.

Set the "Enable FULLFLOW log background compressing" setting to "Enabled".

Administrator > QoE Star configuration
