Protocol groups

Protocol group management

This option is used when you need to create a new group (e.g., from custom protocols) or modify the composition of protocols within a standard group. The names of standard groups can also be edited. All changes will be reflected throughout the interface, including in QoE reports.

Protocol groups have the following identifiers:

- 1 to 32 are used for standard (cloud) groups
- 1000 and above used for custom groups

Setup

Step 1 - Creating a Group

Go to VAS cloud services \rightarrow Protocols groups and click the "+" button in the "Groups" column. You can either override a standard group or create a new one. VAS cloud services > Protocols groups

Grou	lps	
+		
	CREATE A NEW GROUP	
	QFILTER	

1. For Cloud Groups:

- Select the desired group
- If needed, edit the group name
- Click "Save"

			Protocols							
Cloud group * Instant messengers										
Name *	English	V Instant i	messenger: ④							
		Cancel	3 Save							
Group: he group na Save"	ame

	Cloud grou Instant me Name * Group: he group na Save"	Cloud group * Instant messengers Name * English Group: he group name Save" Name * English	Cloud group * Instant messengers Name * English ✓ Instant r Cancel Group: he group name Save" Name * English ✓ Test gro Cancel							

Step 2 - Adding Protocols

Select the created group and click the "+" button in the "Protocols" column. You can add both custom and built-in (cloud) protocols.

After selecting the protocol, click "Save". The protocol will be added to the group. The created group will be available across all sections of the interface.
