VAS Cloud

VAS Cloud - VAS Experts cloud services

For convenient login to VAS Cloud you can configure authorization by token. Description in [Authorization in VAS Cloud by token](#) section.

Description for Advertisement Content Provider

To integrate with VAS Cloud, a potential ad content provider must be able to:

1. Upload ad content for its paratners using Javascript
2. Collect daily statistics on clicks/conversions/accruals and return it through the API interface at the request of VAS Cloud

Requirements for downloading advertising content using Javascript

A script from VAS Cloud launched on the advertiser's web page creates containers for advertising on the page and loads (invokes a download link) the content provider's Javascript code for displaying ads.

Example of a called link:

```
http://provider.com/service/promo/?bid=1526343&size=728x90&cid=49c479c957953b478efd791f050fc26e&bt=19&dv=123456789&sa=TestSubaccount
```

Among other parameters, VAS Cloud transmits the following parameters:

- dv - mandatory parameter specifying the container identifier (div) where the advertising content is to be inserted
- sa - mandatory parameter specifying the subaccount. Click statistics and conversions gathered by the content provider should contain a subaccount grouping.

The URL, names and list of parameters are determined by the content provider.

An example of a script chain returned by a content provider using the CityAds example

Statistics and API Requirements

Clicks/conversion statistics are collected by the content provider. The statistics should also include the amount of commission confirmed by the advertiser.

Statistics should be grouped by date (by day), identifier and advertiser's offer name, by subaccount field.

The API can be either JSON-RPC or JSON REST to suit a content provider's needs. SOAP is supported but discouraged.

Statistic Fields:

- date(Timestamp) - date-time (grouped field)
- offer_id(Int) - offer identified (grouped field)
- subaccount(Varchar) - subaccount (grouped field)
- offer_name(Varchar) - offer name
- traffic_shows(Int) - number of impressions
- traffic_hits(Int) - number of clicks
- traffic_clicks(Int) - number of unique clicks
- traffic_back_url
- leads_total
- leads_approved
- leads_opened
- leads_rejected
- leads_paid_targets
- effectivity_cr
- effectivity_ar
- effectivity_ecpc
- effectivity_ecpl
- commission_approved(Float) - commission confirmed by advertiser
- commission_opened(Float) - opened commission
- commission_rejected(Float) - rejected commission
