# What are the lock counters stored in the statistics log?

```
url/lock=341/5 ( 0,0 )( 1,1,0,98879 )
ssl/lock=47/0 ( 21,457 )( 0,69,69,196647 )
chnprc=0
ccheck/ip_check/lock=2954/503/76
```

**url/lock** - verified url/locked

```
( 0,0 ) :
the first 0 - number of url, that could not be parsed.
the second 0 - number of packets with partial (or relative) url ( url is
transmitted in several packets )
```

```
( 1,1,0,98879 ) -
1 - the number of parsers used
1 - the total number of parsers
0 - the number of released parsers after use
98879 - the maximum number of parsers that can be created
```

**ssl/lock** - similar to url, just for cname

chnprc=0 - parser altering http ↔ https

**ccheck/ip\_check/lock** - 2954/503/76 IP/port check statistics

```
2954 - the number of IP check to be accomplished
503 - actual number of IP checks performed
76 - the number of packets being blocked
```
