# 6 Scheduled developments

## Development Plans for 2022

1. Various IPv6 prefix length support (currently /64 only)
2. Diameter protocol support (Gx, Gy, Gz interfaces)
3. Subscriber quota management (based on PCRF)
4. MITM mechanism implementation
5. 5G network core support
6. Support for EAP-SIM in WLAN networks
7. Improving services: DDoS, Botnet, SPAM detection
8. Improving the custom signature service
9. Product development for corporate clients: optimization of installation and resource requirements.

## Development Plans for 2021

1. Routing. BGP, OSPF protocol support
2. Signatures SDK and definition by SNI (HTTPS) and hostname (HTTP) as a service
3. Configurable WEB-resources classifier

Due to the fact that Red Hat announced the early end of CentOS 8 support by the end of 2021, VAS Experts is working on a strategy to continue using CentOS as a Control Plane. Of the different options at this stage, the following are preferable:

1. Join the initiative of the CentOS project founder Gregory Kurtzer, who intends to create a new rebuild of RHEL called Rocky Linux
2. Migrate to CentOS 8 Stream with limited updates that are included in the official Red Hat.

**The transition to the new version of the OS is planned as a regular update (without reinstallation).**

We will certainly notify you of the decision made and describe it in the documentation.

## Development Plans for 2020

1. Migration to CentOS 8
2. Support for DPDK technology
3. Adding social networks detection by signature: facebook, instagram, ok.ru, vk.com
4. Support for GTP
5. Band management based on VLANid + IP, tunnel-id (GTP)
