Uninstallation (complete removal)

Attention! Uninstallation will result in complete data deletion!

In some cases, it may be necessary to completely remove QoE Stor (for example, if the product was installed on a test DPI or on another server by mistake).

To perform a full removal, run the uninstallation script `fastor-rpm_uninstall.sh`:

```
source <(curl https://vasexperts.ru/install/fastor-rpm_uninstall.sh)
```

This will remove the packages: `ipfixreceiver`, `clickhouse`, and `fastor`, as well as **completely** delete all data!
