3 Parameters specifying connection between FastPCRF and FastDPI

Parameter	Value	Default value	Description
auth_server_dev	interface name	no	It specifies the interface name, for example eth0 that would be used to listen to the port for incoming connections with FastPDI. If the parameter is not specified, the port will be listened on all available interfaces.
auth_server_port	number	29002	The port number used to listen for incoming connections.
auth_server_max_connection	number	16	The maximum number of incoming connections. The maximum value is 16. It is equivalent to the number of fastdpi servers served by the given FastPCRF server.
