## Latest Updates

### **SSG Version 14.0 BETA3** 01.06.2025

L2TP termination support, extended range of cloud protocols (up to 5120 in total), fixes and improvements

### **SSG Version 13.3 Congo** 22.04.2025

New protocols, fixes and improvements

### **GUI Version 2.35.4** 26.09.2024

Connecting to equipment via SSH, redesigning the Hotspot section and its new features

### **SSG Version 13.1 Congo** 24.06.2024

Subscriber activity control, new service: DNS response spoofing

## Popular

**DPDK Interface Configuration** DPI Platform Configuration: DPDK Interface Setup, Packet Processing Parameters, and Memory and Processor Management. Commands for Managing and Verifying DPI Configuration, Supported Protocols, and Network Optimization Methods

**Hardware Requirements and Performance** Hardware Requirements: Functional Capabilities, Architectural Requirements, and Performance Standards Necessary for Effective Traffic Analysis. Virtual Machine Requirements

**DPI Use Cases** Examples of uplink channel optimization, setting up tariff plans and Captive Portal, identifying Wi-Fi users via mobile devices, and managing categorized lists

**VEOS Installation and Configuration** VEOS operating system installation process. Preparation of the installation media and step-by-step instructions for installation and basic system setup

## Product Information

### DPI

Multi-functional platform for traffic management [Go to section](#)

### BRAS

Flexible and scalable software solution [Go to section](#)

### CG-NAT

Transparent network address translation on standard x86 servers [Go to section](#)

### QoE

Collecting statistics, assessing network health and service quality [Go to section](#)

### VEOS

Operating system [Go to section](#)

New EPDG

Solution for launching Wi-Fi

Calling (VoWiFi) [Go to section](#)
